

**Amp'ed RF Technology Product Change Notes**

3/24/2015

**Subject:** BT43H and BT43S Low Power Oscillator input requirement**Effective date:** 3/24/2015**Details:**

For Bluetooth Low Energy support, an external Low Power Oscillator (LPO) is required. Previously, this LPO input was optional. Due to changing support policies and usage cases, it is necessary to make this a requirement for all BLE usage cases.

When using the BT43H and BT43S modules for Classic (EDR/BR) cases, this input continues to be optional.

No module hardware revisions or firmware changes are required for this change.
